Clinical information ...  
anywhere, anytime

## Searching and Listing Patients

*Viewing patient lists and accessing clinical records  
are essential tasks made simple*

### Search for a patient

Quick search for a patient — based on their name or Patient Id.

### List patients by Clinician

When a clinician (eg doctor, nurse or Allied Health professional) is assigned a patient, they can see that patient in *their list of patients*.

When a clinician (eg consultant or registrar) is covering a colleague, they can see all the patients *assigned to their colleague*.

### List patients by Ward or Unit

When a clinician is assigned to a particular ward, they can see *all the patients for that ward*.

When a clinician is covering a service or unit (eg Orthopaedics or Neurology), they can see *all patients for that unit*.

### List patients by Patient Assignment

You can access patient lists as required by your work pattern — during duty hours, after hours, or on weekends.

### List patients by GP

GPs can use Healthspring in small hospitals and nursing homes.

Where a hospital Patient Administration System (PAS) is not available, GPs can access patient demographics from their practice computer system.
